

What people have to say about TIDE

Working with TIDE, we've diversified products with the training and support they have offered. TIDE has provided all equipment support, like papad rolling machines and chikki-making machines that we use for free, packaging and labelling support and helped in obtaining FSSAI certificate and . Our SHG is grateful to TIDE for their support.

Sumathy, VV Puram SHG

When I joined as Principal in the year 2015, we faced many challenges with the water quality. Hardness of water and silt deposits meant that our pipes needed to be changed frequently. After TIDE's installed a water softener, we are comfortable and happy with the quality of water. We can tell the difference in the quality of water for which we are very thankful for TIDE's intervention.

Technology Informatics Design Endeavour
Science and Technology Not for Profit Organization
that leverages technology for conserving the
environment, creating livelihoods and addressing
societal issues

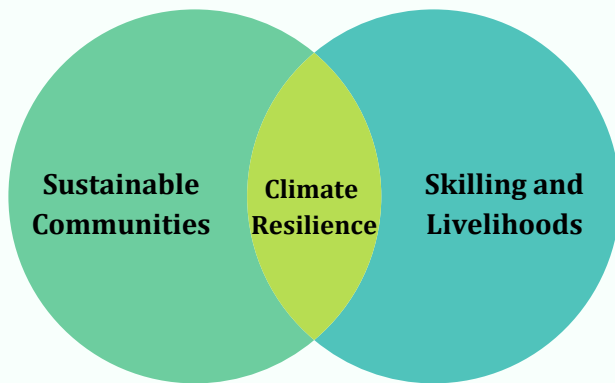

Vision

A world where technology positively and equitably impacts societies and the environment.

Mission

To provide technology solutions for livelihoods, sustainable communities and to build climate resilience.

TIDE's Focus Areas

All our programmes align with the sustainable development goals of the UN.

Core Values

- Science and Technology Human centric environment solutions
- Climate mitigation and adaptation
- Cater to weaker and marginalized sections of society
- Gender balanced development
- Collaborative and cross learning culture
- Transparent, accountable and ethical

Sustainable Communities

Under Sustainable Communities, TIDE builds the climate resilience of vulnerable communities through behavioral change and technological interventions. Our work encompasses '**Sustainable Energy**', '**Water, Sanitation and Hygiene (WASH)**', and '**Building Climate Resilience**'. TIDE adopts data-centric approach to identify location-specific solutions, fostering collaboration, and nurturing community ownership allowing us to deliver impact beyond immediate interventions.

Sustainable Energy – We design and provide local solutions that drive domestic, institutional, and the informal sector, transitioning to renewable energy and energy efficiency.

Water, Sanitation and Hygiene – We pilot cutting-edge technologies to provide basic water, sanitation and hygiene facilities to the vulnerable communities and work closely with government institutions for scaling.

Climate Resilience – We empower students and women with the right tools and resources to combat the impacts of climate change, build resilience and a sustainable future.

Skilling & Livelihoods

Tailoring training for rural women's at WTP

TIDE goes beyond building resilience by providing skills training and linkages for income generation, focusing on climate mitigating measures like areca leaf sheath quality. In FY 21-22, 3000 rural women and youth were made aware of livelihood opportunities, with 1600 receiving skill training. TIDE empowered 750 women to generate their first-time income, resulting in INR 1.5 CR income by trained rural entrepreneurs. Their flagship program, "Queens," trained 100 women in leadership. TIDE offers skilling in food, non-food artisanal, and digital entrepreneurship, using a unique placement center model for home-based and industrial job opportunities. They also provide post-training support for enterprise development. TIDE collaborates with academic institutions, skilled manpower, financial institutions, and state programs to strengthen community resilience.
